Quotes from Last Night's Planning

Price has achieved a target into the 2,800 level and we should plan to trade the immediate DEPARTURE from our pivot (it's also the upper Bollinger Band and prior price swing high).

We'll expect a sell-swing down away from our pivot target

Once again, use 2,800 as your short-term pivot, playing the DOMINANT THESIS sell-swing should it develop or extend beneath it (toward 2,750) or get ready to play the ALTERNATE THESIS short-squeezed breakout scenario should that occur this week.

Today was a THIRD REPEAT DAY where price gapped up, formed negative divergences, then traded down toward support (our DOMINANT Thesis) on a pathway DOWN AWAY FROM the 2,800 level.

Today achieved 2,750 though at least two retracement or sell-swing opportunities developed and are the lessons for the day.

Power Trenders Strong Stock Scan

We're seeing the NEW top twelve relative strength leaders (via algorithm) in trending markets and the general expectation is to buy retracements or breakouts in these strongly trending names. The logic is that what is strong tends to get stronger (stocks attracting money flow tend to continue attracting additional money flow). Right now these would be the names and thus candidates above for you to do additional research and add these to your stock-scan list for possible inclusion into a swing trading portfolio on pullbacks or outright breakouts.

HOW WE USE THESE STOCKS:

I write the Power-Trending Stock Section for Swing Traders looking for candidates that complex stock scans will likely miss. The scan targets strongly trending stocks and the expectation is that price will continue trending higher, though of course additional analysis is required rather than just buying these names collectively. To participate in these stocks, we typically wait for a pullback/retracement to a rising moving average or Fibonacci/Trendline level to put on a buy/retracement where the stop is trailed under the average. These would be similar to how I describe intraday 'flag' retracements on a developing Trend Day.

Planning the 30-min Intraday @ES Futures Chart

Price triggered our DOMINANT THESIS today, which was to expect a SELL SWING down away from the 2,800 level perhaps toward the 2,740/2,750 highlighted target.

With the move almost complete, look for a continued sell-swing event taking us down toward or even beneath the 2,740 level as highlighted. If we don't see a break beneath the 2,750 low, look for a BOUNCE/RALLY Thursday off our 2,750 pivot.

Planning the Next Day (Daily S&P 500 Cash Index)

Price is doing exactly what it should be doing which is refreshing! We're seeing price trade DOWN AWAY FROM our 2,800 pivot on a reversal candle into the upper Bollinger and key reference level as expected.

Simply use 2,750 or 2,740 as your short-term downside target and trade the lower frames.

With this level now achieved - or at least the 2,750 achieved - become cautious/safe here and prepare to trade the departure AWAY FROM the 2,750 target (back toward 2,700 if beneath and back to 2,800 if above, making it a key midpoint pivot).
