## Major Economic Reports for Tomorrow...

WEDNESDAY is a FED DAY (expected to raise rates)

## Quotes from Last Night's Planning

*For Tuesday, we "should" expect a lower volatility range style session with a potential bullish bounce bias to it. We know that WEDNESDAY will be a Fed Day so it's also logical to see consolidation action ahead of the announcement.*

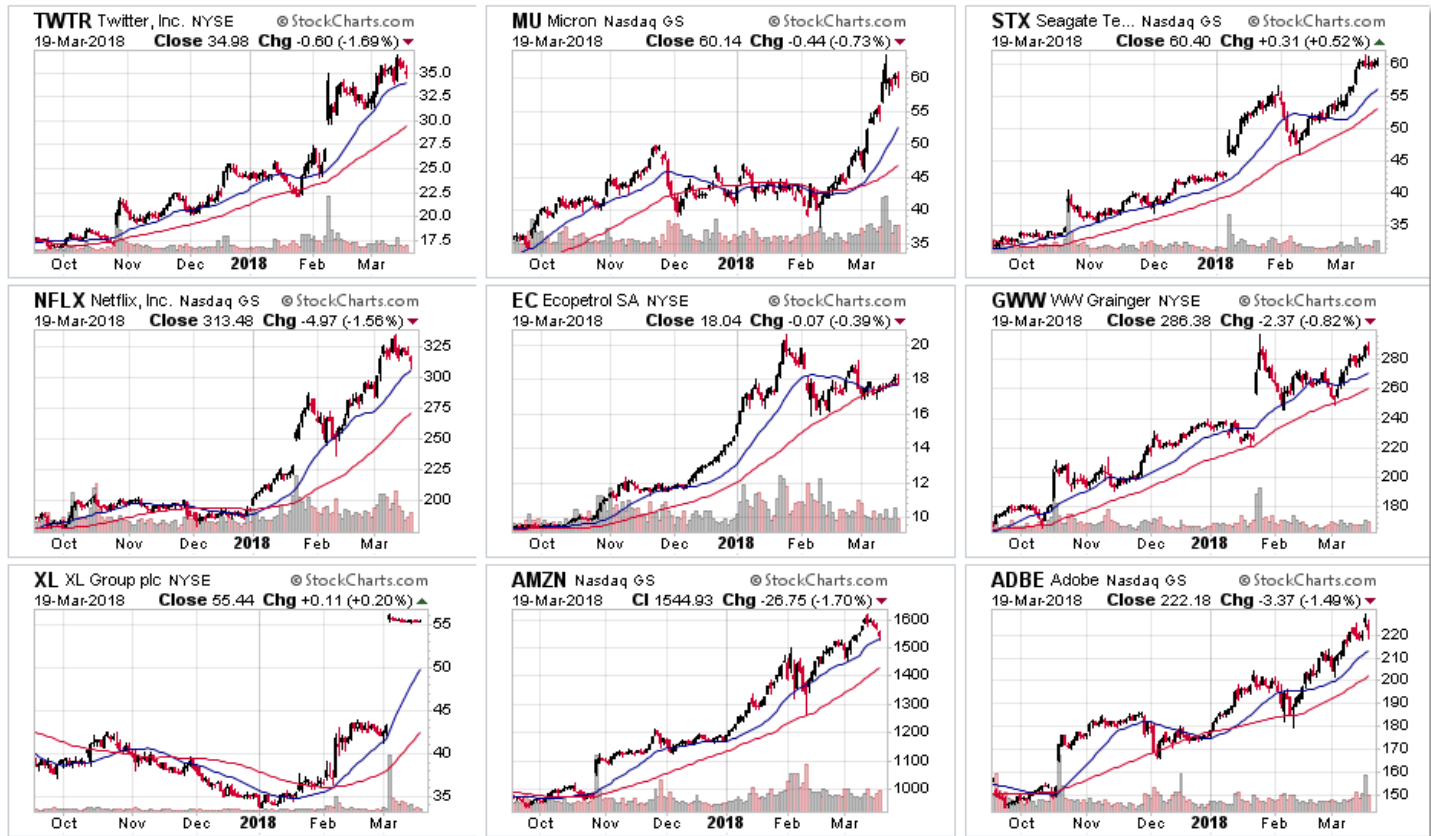

*Simply watch for a continuation bounce swing higher UP AWAY FROM the 2,700 level*

That's exactly what we got! Price continued trading UP AWAY FROM the 2,700 target in a LOW VOLATILITY RANGE style session today.

I highlighted three bullish support BOUNCE trade opportunities that developed within the trading range and one aggressive short-sale candidate - a "fade" on divergences into a range resistance high.

We place stops outside the Bollinger Band or prior high/low and trade a movement toward the prior low/high on Range Days.

## Power Trenders Strong Stock Scan

We're seeing the NEW top twelve relative strength leaders (via algorithm) in trending markets and the general expectation is to buy retracements or breakouts in these strongly trending names. The logic is that what is strong tends to get stronger (stocks attracting money flow tend to continue attracting additional money flow). Right now these would be the names and thus candidates above for you to do additional research and add these to your stock-scan list for possible inclusion into a swing trading portfolio on pullbacks or outright breakouts.

### HOW WE USE THESE STOCKS:

I write the Power-Trending Stock Section for Swing Traders looking for candidates that complex stock scans will likely miss. The scan targets strongly trending stocks and the expectation is that price will continue trending higher, though of course additional analysis is required rather than just buying these names collectively. To participate in these stocks, we typically wait for a pullback/retracement to a rising moving average or Fibonacci/Trendline level to put on a buy/retracement where the stop is trailed under the average. These would be similar to how I describe intraday 'flag' retracements on a developing Trend Day.

## Planning the 30-min Intraday @ES Futures Chart

We'll "punt" on predicting the future Wednesday because it will be a FED DAY.

Fed Days often begin with a small gap and the gap is filled in the morning session. There may be a couple trades before the announcement, but the hour before the Fed policy announcement often is flat and without opportunity.

We then get a 1,2,3 breakout or high volatility period - most traders should avoid it - after the 2:00pm EST announcement.

## Planning the Next Day (Daily S&P 500 Cash Index)

We're continuing the "Grand Rectangle" or sideways trading range (it also looks like a large triangle) that has developed between 2,650 and 2,800.

The Fed is expected to RAISE interest rates 0.25% tomorrow and anything else would be a surprise to the market an increase volatility.

Should the pattern continue, look for a continued swing up away from 2,700 but become bearish beneath 2,700 on a surprise breakdown and triangle breakout.
