Quotes from Last Night's Planning

Let price stabilize Tuesday - be cautious - but do reference early February where a similar sharp sell-swing to this level resulted in a multi-day bullish rally higher. It could happen again but take it day by day and trade by trade with respect to our key price levels.

For Tuesday, note that we're back at the 2,660 level which traded above Friday's high. Use 2,645 (20 EMA) as your bearish breakdown/support pivot

What a day! We did get our expected consolidation or pause/range contraction after yesterday's (also expected) bullish Trend Day up away from the 2,600 level.

The first four trades were RANGE DAY FADE opportunities, taking place into highs and lows with divergences. However, price broke beneath our support level and then 2,650 then 2,645 to trigger a BREAKOUT or REVERSAL session - range expansion after the morning's range expansion. It morphed into a violent/volatile sell-swing where the key was to get the trade(s) on and trade the breakdown BACK toward our 2,600 level once again. At least two pullbacks (retracements) occurred as seen best on the 1-min chart (trade the lowest frame in a trend).

Power Trenders Strong Stock Scan

We're seeing the NEW top twelve relative strength leaders (via algorithm) in trending markets and the general expectation is to buy retracements or breakouts in these strongly trending names. The logic is that what is strong tends to get stronger (stocks attracting money flow tend to continue attracting additional money flow). Right now these would be the names and thus candidates above for you to do additional research and add these to your stock-scan list for possible inclusion into a swing trading portfolio on pullbacks or outright breakouts.

HOW WE USE THESE STOCKS:

I write the Power-Trending Stock Section for Swing Traders looking for candidates that complex stock scans will likely miss. The scan targets strongly trending stocks and the expectation is that price will continue trending higher, though of course additional analysis is required rather than just buying these names collectively. To participate in these stocks, we typically wait for a pullback/retracement to a rising moving average or Fibonacci/Trendline level to put on a buy/retracement where the stop is trailed under the average. These would be similar to how I describe intraday 'flag' retracements on a developing Trend Day.

"S&P 500 Sector Performance" View

This chart and sector comparisons are useful two ways:

First, we get a broader sense of what's going on beneath the market subdivided into sectors.

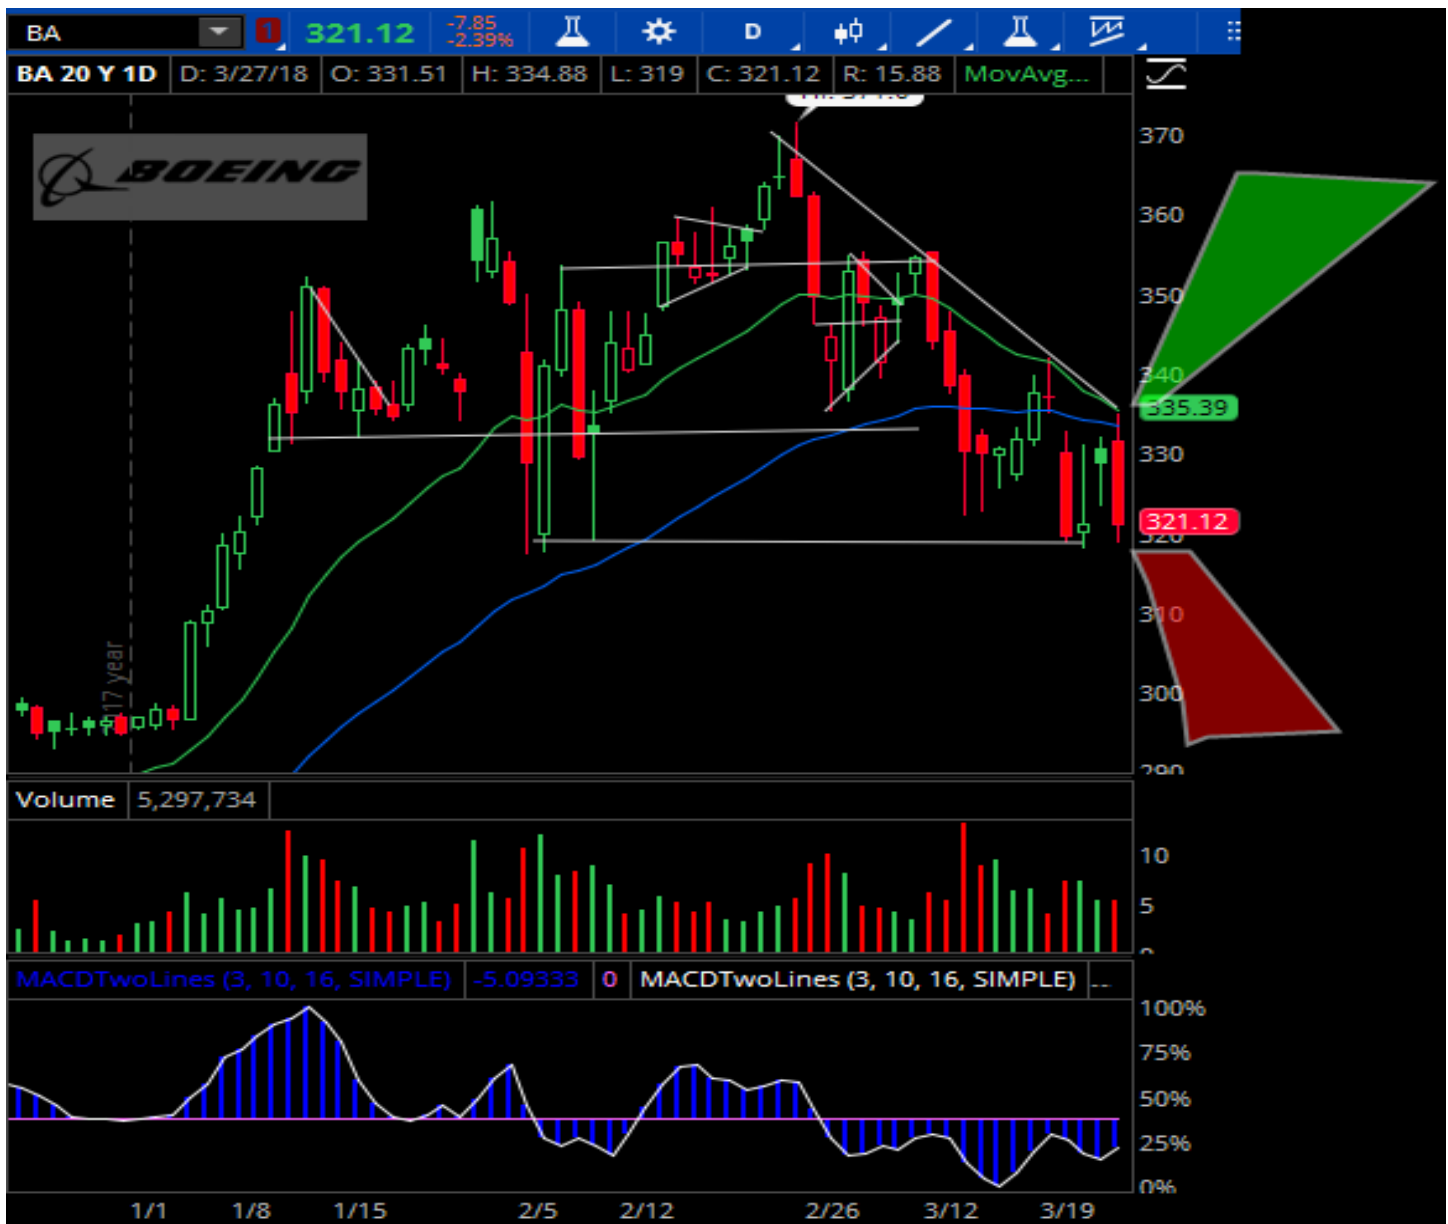

Second, if you trade beyond the S&P 500 or futures/ETFs, you can pinpoint bearish/weak stocks by starting with bearish/weak sectors.

The idea is outperform the market via short- selling a weak stock(s) in weak/bearish sectors on a down trend day (or vice versa).

Key Stocks to Watch Right Now

These featured stocks are all at MAKE or BREAK support levels - aggressive traders can seek to play the DOMINANT THESIS bounce UP AWAY FROM the highlighted levels - via our price pathways - while watching for a trigger break of the ALTERNATE THESIS (breakdown/breakout) which opens a rapid sell-path (collapse) to the lower price targets.

Planning the 30-min Intraday @ES Futures Chart

We're back to the 2,600 "Roundie" and critical support level and thus we'll exercise the same game plan we had on Friday. We'll look for ANOTHER bullish rally up away from this pivot but will be equally - if not more - ready for a breakdown that triggers under 2,600 which could set in motion another violent SELL-SWING to Daily Chart targets.

While price should bounce, if it does it, it likely triggers another collapse scenario where we'll be actively short-selling price and liquidating positions on a break beneath 2,600 (and the key levels mentioned in the stocks above).

Planning the Next Day (Daily S&P 500 Cash Index)

It's so nice the market did it twice! We're seeing our WEEKLY chart above and the retest of the 2,600 level along with the rising 50 week (blue) EMA just beneath 2,600. Ultimately, give the market a chance to bounce up away from the 2,600 level by noting the 2,570 weekly EMA and prior support pivot (from October - the white trendline).

However, IF PRICE FAILS the support test again into 2,600, then look for lower targets such as 2,500 and 2,450 to be materialized on another violent sell-swing event into April.
