Quotes from Last Night's Planning

We'll be NEUTRAL as stated on the hourly/intraday chart, ready to trade an ongoing DEPARTURE from the 2,720 level.

Focus on bearish plays beneath 2,700 and bullish ones up toward 2,750.

Until either of those targets are achieved - or broken - remain neutral/safe here.

Indeed, our 2,720 level was the key for trading today's session as well.

We remain NEUTRAL within this range and were allowed to play both sides of the market on another intraday RANGE day.

Note the opportunities - more numerous than yesterday - along with the outcomes for future reference.

February 20 Power Trenders Strong Stock Scan

We're seeing the NEW top twelve relative strength leaders (via algorithm) in trending markets and the general expectation is to buy retracements or breakouts in these strongly trending names. The logic is that what is strong tends to get stronger (stocks attracting money flow tend to continue attracting additional money flow). Right now these would be the names and thus candidates above for you to do additional research and add these to your stock-scan list for possible inclusion into a swing trading portfolio on pullbacks or outright breakouts.

HOW WE USE THESE STOCKS:

I write the Power-Trending Stock Section for Swing Traders looking for candidates that complex stock scans will likely miss. The scan targets strongly trending stocks and the expectation is that price will continue trending higher, though of course additional analysis is required rather than just buying these names collectively. To participate in these stocks, we typically wait for a pullback/retracement to a rising moving average or Fibonacci/Trendline level to put on a buy/retracement where the stop is trailed under the average. These would be similar to how I describe intraday 'flag' retracements on a developing Trend Day.

FinViz "S&P 500 Performance" View

This chart and sector comparisons are useful two ways:

First, we get a broader sense of what's going on beneath the market subdivided into sectors.

Second, if you trade beyond the S&P 500 or futures/ETFs, you can pinpoint bearish/weak stocks by starting with bearish/weak sectors.

The idea is outperform the market via short- selling a weak stock(s) in weak/bearish sectors on a down trend day (or vice versa).

Planning the 30-min Intraday @ES Futures Chart

We're fortunate that the Fibonacci Grid and the Hourly Chart give us the best levels to frame our intraday trades.

We'll keep using this logic as price trades between our 2,663 level and 2,750 upper pivot.

Note that price is balanced at the midpoint near 2,720 which makes us NEUTRAL going into Tuesday's session. There's no bias while price trades within this range (see earlier in February).

It's the same tomorrow as it was yesterday - trade the departure away from our levels or the range while we remain within them as was the case today.

Planning the Next Day (Daily S&P 500 Cash Index)

Price rallied back toward the midpoint or middle of the decline-and-recovery event.

Once again, we refer to the lower timeframe and Fibonacci/Range Levels in price for our trading tactics.

Continue playing - as we've done successfully this week - WITHIN the range until we get a breakout beyond 2,750 or beneath 2,650.
