

Daily "Idealized Trades" Report

Trading Lessons from the Intraday Frame (study)

@ES's 1-min Intraday Chart (Additional Trades)

T3 Trend Day!

With the bullish Tech Sector surging, a T3 Trend Day developed giving us at least three opportunities to buy into the rising session on pullbacks, generating up to 12 or more points of Profit (\$1,200 per 2 contracts)

We lessen the importance of ALL indicators (including momentum and internals) on Trend Days. Notice how the divergences kept you cautious and thus missing out on the final trade(s) of the day.

@NQ NASDAQ 5-min Chart

In the NASDAQ (@NQ) today, with the three pure pullbacks in a strong trend day, up to 60 points was possible today (just using the three pullbacks)

US Home Price Index (9:00am)

Quotes from Last Night's Planning

Again, we'll see how things shake out between now and the open but it could set the stage for a very bullish Friday if these price gaps hold.

We have the information that some of our major tech companies are gapping UP in the immediate post-market hours and this could set the stage for a very bullish Friday.

Our bullish thesis triggers above the 2,563/2,565 pivot which makes us "breakout bullish" toward 2,575 and beyond IF price holds above our trendline high.

T3 Trend Day!!! Volatility and Opportunity are back!

That's precisely what happened - Amazon's big earnings set the stage for a very bullish Friday and we traded it via our T3 Trend Day tactics.

At least three bullish trades developed - all pullback/retracement opportunities - as indicated above.

Did you go short at any point today? You made a trading error/broke a trading rule and likely lost money because of it. DO NOT FIGHT or fade a Trend Day in motion. That's the rule.

October 23 Power Trenders Strong Stock Scan

We're seeing the NEW top twelve relative strength leaders (via algorithm) in trending markets and the general expectation is to buy retracements or breakouts in these strongly trending names. The logic is that what is strong tends to get stronger (stocks attracting money flow tend to continue attracting additional money flow). Right now these would be the names and thus candidates above for you to do additional research and add these to your stock-scan list for possible inclusion into a swing trading portfolio on pullbacks or outright breakouts.

HOW WE USE THESE STOCKS:

I write the Power-Trending Stock Section for Swing Traders looking for candidates that complex stock scans will likely miss. The scan targets strongly trending stocks and the expectation is that price will continue trending higher, though of course additional analysis is required rather than just buying these names collectively. To participate in these stocks, we typically wait for a pullback/retracement to a rising moving average or Fibonacci/Trendline level to put on a buy/retracement where the stop is trailed under the average. These would be similar to how I describe intraday 'flag' retracements on a developing Trend Day.

FinViz "S&P 500 Performance" View

This chart and sector comparisons are useful two ways:

First, we get a broader sense of what's going on beneath the market subdivided into sectors.

Second, if you trade beyond the S&P 500 or futures/ETFs, you can pinpoint bearish/weak stocks by starting with bearish/weak sectors. The idea is outperform the market via short-selling a weak stock(s) in weak/bearish sectors on a down trend day (or vice versa).

Planning the 30-min Intraday @ES Futures Chart

Price broke through our BULL FLAG trendline and triggered our DOMINANT THESIS (a bounce and breakout, especially following the strong post-market activity).

Use 2,580 as your short-term pivot and continue playing "ignore it all" bullish above it and otherwise cautious/consolidation beneath it.

Don't think - just trade, especially in this feedback loop, bullish-dominated market.

Planning the Next Day (Daily S&P 500 Cash Index)

Price continues its journey toward 2,600 by closing at a new all-time high just above 2,581.

Keep this simple - if you complicate this, you'll either be too defensive/cautious (which is fine - it's better than being overly aggressive) or worse will short/fight this market and lose money.

The bull market continues - we just had a pullback and rally - and we'll keep playing this bull market uptrend as long as it lasts and a breakout beyond 2,580 does suggest the market is heading likely toward 2,600 or higher.
