Quotes from Last Night's Planning

Price trended back toward the prior high but REVERSED shy of our retest target. A NEW short-term TRADING RANGE has developed at the high as we keep a similar game-plan:

Note that price is BETWEEN the 2,680 and 2,700 pivot/target levels and we'll use those as our reference levels.

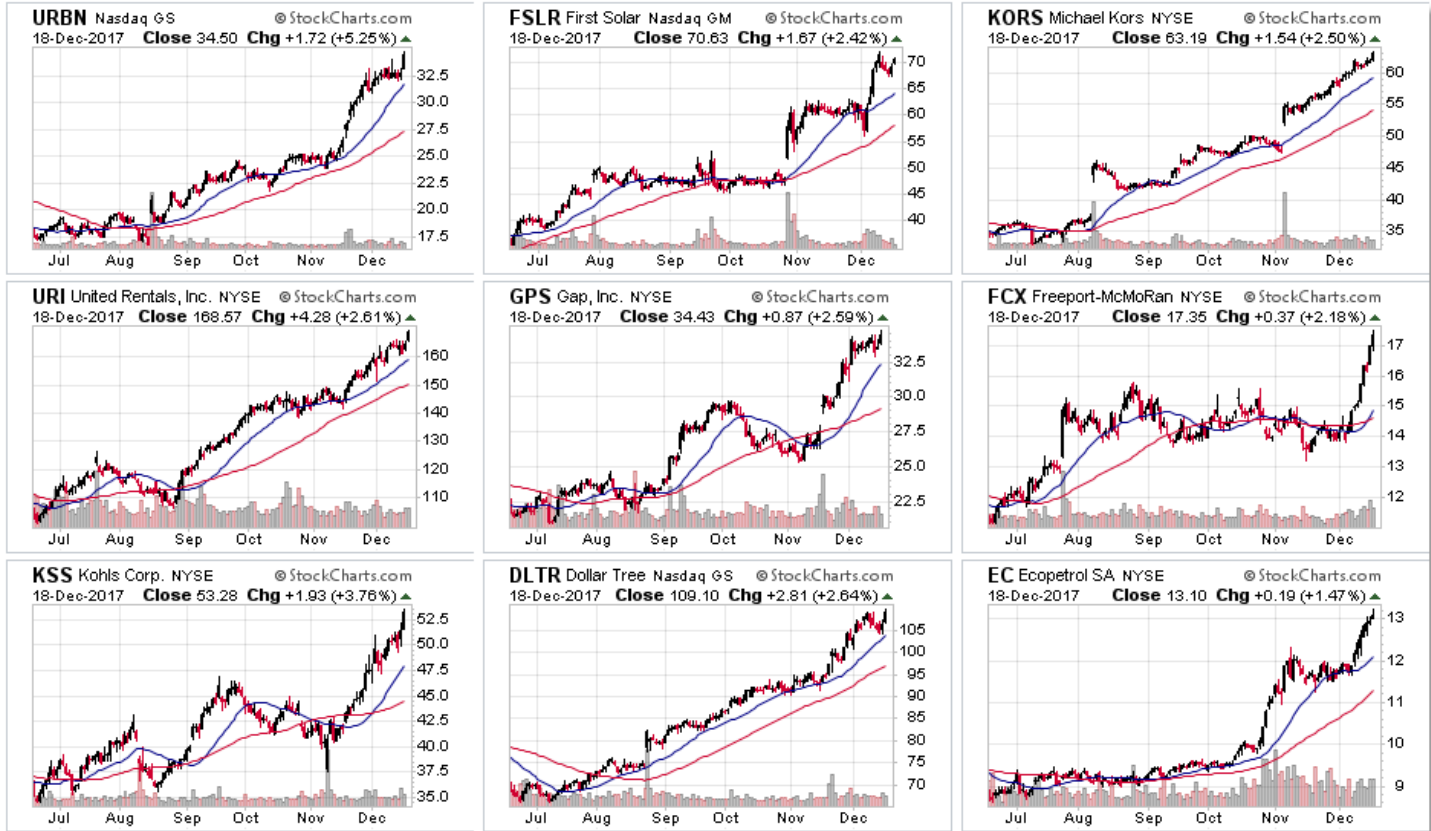

Friday could be a low volatility, low volatility RANGE style session within our boundaries before Monday's holiday so plan any short-term trades WITHIN these boundaries.

The market did indeed continue the LOW VOLATILITY, LOW VOLUME activity this Tuesday with not a single good trade to discuss within this range (boundaries).

Crude Oil @CL was the big star of the day, breaking out of a symmetrical triangle into a perfect T3 Trend Day; Gold created a second bullish trend day as well.

Trade other markets when the stock market is (or is expected to be) flat like this.

December 18 Power Trenders Strong Stock Scan

We're seeing the NEW top twelve relative strength leaders (via algorithm) in trending markets and the general expectation is to buy retracements or breakouts in these strongly trending names. The logic is that what is strong tends to get stronger (stocks attracting money flow tend to continue attracting additional money flow). Right now these would be the names and thus candidates above for you to do additional research and add these to your stock-scan list for possible inclusion into a swing trading portfolio on pullbacks or outright breakouts.

HOW WE USE THESE STOCKS:

I write the Power-Trending Stock Section for Swing Traders looking for candidates that complex stock scans will likely miss. The scan targets strongly trending stocks and the expectation is that price will continue trending higher, though of course additional analysis is required rather than just buying these names collectively. To participate in these stocks, we typically wait for a pullback/retracement to a rising moving average or Fibonacci/Trendline level to put on a buy/retracement where the stop is trailed under the average. These would be similar to how I describe intraday 'flag' retracements on a developing Trend Day.

FinViz "S&P 500 Performance" View

This chart and sector comparisons are useful two ways:

First, we get a broader sense of what's going on beneath the market subdivided into sectors.

Second, if you trade beyond the S&P 500 or futures/ETFs, you can pinpoint bearish/weak stocks by starting with bearish/weak sectors. The idea is outperform the market via short-selling a weak stock(s) in weak/bearish sectors on a down trend day (or vice versa).

Planning the 30-min Intraday @ES Futures Chart

With Monday being the Christmas Day holiday, our plan will apply to Tuesday's session and the remainder of this holiday week.

We'll pick up more analysis Tuesday evening with more information but for now, know that price is in a short-term trading range just beneath 2,700 and has slightly better odds of trading DOWN away from it toward 2,665.

Play bearishly beneath 2,680 but remember the bullish holiday drift that may keep this market at the highs.

As we traded Tuesday's session, nothing has changed as the market tightened the range.

Planning the Next Day (Daily S&P 500 Cash Index)

Similarly, we have a natural bearish RETRACEMENT or sell-swing pathway lower for price given divergences at the upper Bollinger Band shy of the 2,700 target.

That will be our clear 'pullback' dominant thesis (toward 2,650) but we will be equally ready to play this ongoing bullish holiday price drift OR an actual breakout/short-squeeze rally that triggers above 2,700.

We're seeing the pullback continue, yet again focus on the narrow intraday range.
