Intraday Intermarket

The majority of the week - until Friday's big Jobs Report - gave us range style contraction price action like we've been seeing. However, the reactions following the better-than-expected jobs numbers sent stocks surging along with Gold and Oil. The Dollar - after surging the previous session - pulled back from our 90.00 newly achieved target.

Follow these levels within any position adjustments you may need to do this week.

10-Year Treasury Notes ($UST – Price)

Monthly

As the Fed continues a Rate-Hiking campaign, we'll be cautious and even bearish on Bonds long-term especially beneath 122 and 121 should that occur. Watch support here for a bounce or breakout event though odds continue to favor more downside future action.

Ultimately the 120 level is the critical MAKE or BREAK pivot for the near-term future and that's precisely where Bonds closed last week AGAIN.

Weekly

Bonds FELL at weekly support recently as expected, crushing lower THROUGH 122 and the 121.50 target. Compare the monthly 50 EMA with the breakdown and collapse toward the prior support on the weekly chart from 2015.

With price now JUST BENEATH our 121 pivot level into **120's target** as we look to play a **bullish BOUNCE/RALLY or retracement higher toward the 123** weekly pivot target (pullback).

If that does not happen and price falls further - and yields spike higher - we could see even more selling pressure take the price of bonds AND stocks lower (alternate thesis for now).

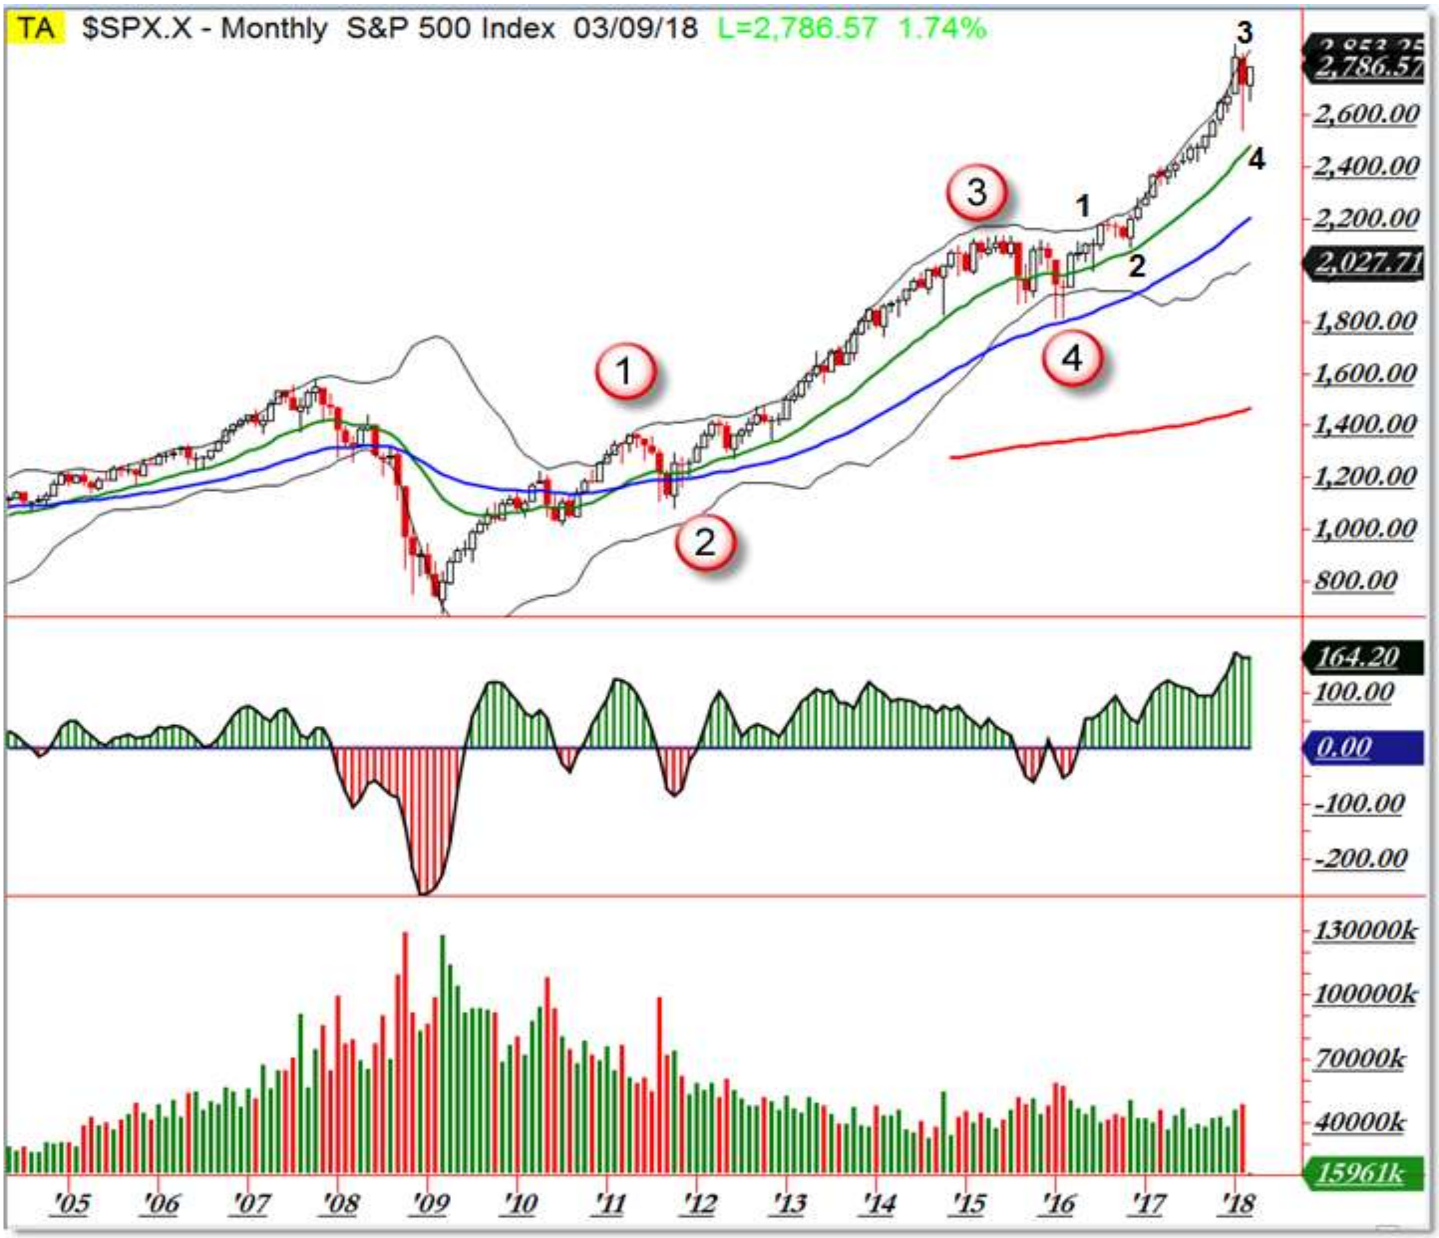
Daily

As mentioned on the WEEKLY chart, bonds are in a short-term DOWNTREND into a key weekly chart SUPPORT pivot at 122.00 (here) then 121.50 **and when those levels failed, we turn to 120.**

Price traded all the way down through support **toward 120 where we begin next week** at a critical round number in an overextended sell-swing/collapse lower. Be ready for a bounce that is TRYING to occur but so far is having trouble breaking above the 20 EMA.

US S&P 500 ($SPX)

Monthly



February gave us a wide monthly candle of high volatility; the non-stop multi-month up-rally was grossly overextended and was unlikely to end without a collapse bar at a minimum - and here it is.

Note the lower frame levels and monitor the immediate departure from the critical levels - both the Weekly and Daily long-term pivots have been achieved as price consolidates and now trades up away from 2,700.

Weekly

Clearly price gave us our "violent snap-back" that collapsed us from 2,900 toward 2,500. After that, we've seen a few weeks of sideways consolidation "work-off" the high volatility events. We're seeing our continuation bullish move or rally UP AWAY FROM the 2,550 pivot toward 2,800 though - as we'll see on the Daily Chart - price is pausing at the midpoint of the volatility.

Though it seemed like the consolidation could last forever, price did begin its upward journey (finally) Friday.

Daily:

Not much changed as price returns to stability/consolidation ahead of a future breakout (departure) from these consolidation levels. If not already positioned, remain NEUTRAL between 2,700 and 2,750 and ready for a breakout.

That was our key quote from last week and price DID consolidate between these two reference levels - ultimately forming a TRIANGLE - before breaking out impulsively with a powerful Trend Day Friday.

This makes us now BULLISH above 2,800's target (toward new all-time highs) or else cautious should we remain beneath 2,800 and return into the 2,700/2,750 range.

Gold

Monthly

Gold broke out of our sideways trend recently, allowing aggressive traders to play the breakout swing UP AWAY FROM the $1,300 known resistance target. Price then played up toward our $1,370 target and we used it as our departure point to play the bearish DEPARTURE (retracement) from this level. At this point, a SIDEWAYS trading range (triangle) has developed with price still trading DOWN away from our $1,360 pivot (see Weekly Chart).

Weekly

We've been playing BEARISHLY for our ongoing departure/sell-swing DOWN AWAY FROM the $1,350 level, playing for $1,300's price overlap as price closed the week just above our midpoint target. We're waiting for a bounce but price continues to stall near $1,300.

We got an initial bearish play down away from $1,370 but then a violent rally the prior week up off support - as planned - back into our pivot. Price traded DOWN AWAY FROM it again last week giving us a support target of the 20 day week EMA near $1,330 and resistance at $1,360.

Use $1,325 as your pivot for this week.

Daily

We'll repeat last week's quote as it's identical to this week (though closer to our targets):

Like stocks, it's LATE in the game to get long/bullish here but again we don't want to fight/fade (trade against) the bullish upside strong price action. Play the departure from $1,340.

Once again, the Daily Chart places price **BETWEEN the 20 and 50 day EMA** making a BREAKOUT play the most logical approach if you're not already positioned.

We're also seeing price poised EXACTLY at the upper Fibonacci Retracement.

WTI Crude Oil ($WTIC)

Monthly

As always, start with the Weekly Chart and note key levels and plans - including targets for the retracement toward weekly and daily target support. Oil remains in a longer-term sideways trend with bullish overtones and bullish short-term trends.

With the compression on the Monthly chart, it's best to plan your trades on lower frames.

Weekly

Here's again a quote repeated from last week that catches us up to speed:

The market is trading at the highs but diverging/weakening on the Daily Chart so note the pullback play toward $60 on the weekly chart should we get a breakdown beneath $64 (daily).

As we'll see on the Daily Chart, Oil - like stocks - trades within a sideways compression or TRIANGLE price pattern. Our $60.00 level is critical, making us bullish above it or bearish beneath it (down toward $55 or else back toward $67 on a departure play).

Daily

As was logical given the divergences - and the sell signal in stocks - Oil collapsed DOWN AWAY from our $66.00 and $65.00 level toward our weekly pivot at $60.00 and then stabilized.

While that's simple and complete, note any "departure" play or bounce up away from this level as would be the expectation in stocks.

That was the correct strategy last week as stocks rallied higher with reversal candles at pivot support all last week. Note the target achieved into $62.50 (with stocks) and treat Oil in a similar game plan as you do stocks at similar bounce-after-falling levels - though in a range.

US Dollar Index ($USD)

Monthly

Targets have been achieved on all timeframes so update your positions here in the Dollar with respect to our Wide Neutral Range and bull/bear pathways.

Price fell once again beneath our critical pivot near $91.00, collapsing in a violent breakdown as seen best on the Weekly Chart. Note the Fibonacci Level (61.8%) in play near the 88.50 level and the bounce that occurred last week.

Weekly

The short-term downtrend continues with price trading back down - then breaking strongly beneath (on high volume) - the 90.00 **low toward our 61.8% pivot target of 89.00.**

Here's the active quote from last week that holds sway this week too:

The Dollar collapses while the US Stock Market surges as the strong inverse relationship continues but should stocks continue fall, we would expect the Dollar to BOUNCE from here.

Right on cue and off our target, the Dollar bounces - potentially toward $92.00.

Daily

Again, let's start with last week's quote as we update this week:

However, the Dollar trades into the 61.8% Fibonacci retracement on a small positive divergence with reversal candles, suggesting odds favor a BOUNCE up away from 89.

With the Dollar into $90.00, look to play cautiously here as our short-term goal is achieved with a violent - yet expected - rally. Cautious is key here. The same strategy that we used last week - departing from 89.00 - is again at play in the week ahead for us.

At this point, play the DEPARTURE from $90.00 which is once again where we begin the week.
